

Framence and Néphélé Data Control announce strategic partnership

Photorealistic digital twins for buildings and technical facilities meet expertise in data center management

Bensheim, Germany, 27.07.23 – Framence, a pioneer in the creation of photorealistic digital twins for technical facilities and industrial sites, announces a strategic partnership with the French company Néphélé Data Control. This collaboration marks a significant milestone for both companies and strengthens their position in their respective industries.

Framence is known for its pioneering technology that enables the creation of highly detailed digital twins of production installations and industrial sites. Applications range from factories and airports to complex chemical and pharmaceutical manufacturing facilities. The company is proud that its solution has been met with an enthusiastic response from the industry and that its growth has been fast.

Néphélé Data Control is a French IT company with over 20 years of experience in Data Center Information Management (DCIM) & implementation of data center tools. It offers a wide range of services focused on data center optimization, operation and relocation. As a long-standing partner of the German speedikon group of companies, of which Framence is a part, Néphélé Data Control is well-known in the data center industry. Thanks to the Framence partnership, the company is now expanding into the construction progress documentation and industrial building operations market.

The decision to work with a local partner like Néphélé Data Control reflects Framence's strategic vision. "We strongly believe that working with local partners is the key to sustainable success," says Adrian Merkel, CEO of Framence. "Local partners know the market, have a broad network and are experts in the language and cultural background. These factors are essential for smooth collaboration and effective solution finding."

About Framence

Framence is a pioneer in the development of photorealistic digital twins for buildings and industrial environments. Framence's revolutionary technology enables companies to create highly accurate digital twins of technical assets and entire technical environments. By using Framence's digital twins, companies can significantly optimize planning processes, ensure much more efficient operations, and can thereby realize important financial benefits and savings.
